

Consolidating EDC, eSource, and eTMF into a Single GxP-Validated Clinical Ecosystem

Protocol AI & Unified Workflows

Clincove consolidates clinical operations by integrating Electronic Data Capture (EDC), eSource (SMR), and document management (eTMF & eISF) into a single, seamless platform. Its intelligent Protocol AI module reads study protocols to automatically generate compliance-ready Case Report Forms (CRFs), visit checklists, and budgets—slashing setup times from weeks to hours and avoiding disconnected legacy vendors.

Uncompromising HIPAA Scope Isolation

Designed for secure data-plane execution, Clincove enforces multi-tenant security and strict patient-level isolation on all clinical databases. Backed by the robust StrangeLoop engine, the platform implements a deny-by-default architecture where records for specific studies (e.g., Study *SL-TEST-A*, Patient *P1*) are strictly isolated from sibling records or foreign studies, ensuring absolute patient privacy.

Point-of-Care eSource Synchronization

By capturing Source Medical Records (SMR) digitally at the point of care during patient visits, Clincove streams structured, timestamped data directly into the EDC. This completely eliminates manual transcription steps, prevents up to 3,200 data discrepancies per trial, and accelerates database locks using automated AI-driven queries and integrated medical coding (MedDRA and WHODrug).

Ready to accelerate your trials? Contact clinicalops@clincove.com

75% Faster Study Startup

Clincove cuts average study deployment from 12 weeks to 2-4 weeks, launching first patient visits rapidly with zero upfront infrastructure costs.

Therapeutic Solutions

Specialized Oncology modules deliver 40% faster safety signal detection, while Vaccine modules enable 70% faster site activation.

Instant eISF & eTMF Sync

Site uploads to the Investigator Site File sync instantly with the Trial Master File, automatically indexed using OCR and TMF standards.

Clincove is founded by Mehdi Al-Khalissi & Michael Sousa. Fully FDA 21 CFR Part 11, HIPAA, and GDPR compliant. Powered by StrangeLoop.
